

Investigation of Particulate Matter Originating from Wood Combustion in Residential Areas

By Md. Aynul Bari

Shaker Verlag Aug 2009, 2009. Buch. Book Condition: Neu. 21x14.8x cm. Neuware - During winter especially in residential villages, wood is used as a renewable fuel to a certain extent for room heating. Smoke emitted from wood burning in such areas can be a significant contributor to regional haze and high PM10 concentrations. Exposure to elevated levels of wood smoke is likely to have both short and long-term negative health effects. This includes the increasing risk of cancer caused by some of wood smoke compounds. Therefore, the objective of this study was to find a method to determine the contribution of wood smoke particles to the total PM10 load in residential areas. The developed method was applied during two winter seasons in two residential areas. From November 2005 to March 2006 particlephase PM10 samples were collected in Dettenhausen near Stuttgart which is surrounded by forests of the 'Naturpark Schönbuch'. Within an UBA (Federal Environment Agency) project samples were also collected during winter 2006/07 in the residential site Bechtoldsweiler near Hechingen. These ambient air samples were collected on pre-baked quartz fibre filters and analysed by gas chromatography mass spectrometry (GC-MS). Forty-six different organic compounds were detected and quantified in this study including...

Reviews

This is the best pdf i have got go through until now. It is loaded with wisdom and knowledge I discovered this publication from my i and dad encouraged this book to find out.

-- Aryanna Sauer

The publication is great and fantastic. I am quite late in start reading this one, but better then never. I discovered this pdf from my dad and i suggested this ebook to discover.

-- Linnie Kling
