Speciation of solids from mine or geothermal sites. The solids were extracted with solutions (F1 - F5) of increasing strength. Extracting solution F5 is a strong acid. From Bloom, 2002. to recover mercury primarily from naturally occurring Of greatest significance was the verification that the mine-site-derived solids are approximately 20 times less organic matter. Most of the extracted mercury from the actual bioavailable for methylation than is dissolved mercury mine-pile materials was recovered only with the F5 fraction, (Hg). This...
