Should the brushes not make good contact they must be trimmed. If they are of leaf copper or copper gauze they must be filed to fit: a jig is usually provided to make this easier. If they are of carbon they can be filed roughly to shape and then cut down with sandpaper. This is done by clamping the brushes in place in the holders and running a strip of sandpaper, about No. 1, between the commutator and the brushes: the sand side of course being next the brushes and the paper made to conform closely to the shape of the commutator. Start the machine with all the...
